

# HERAT EARTHQUAKE ASSESSMENT (OVERALL)

## SNAPSHOT

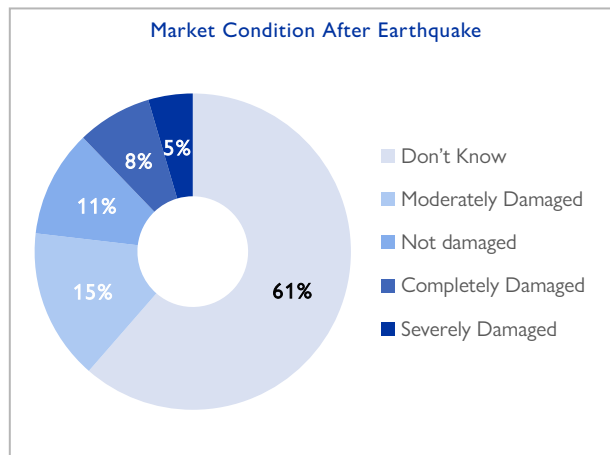

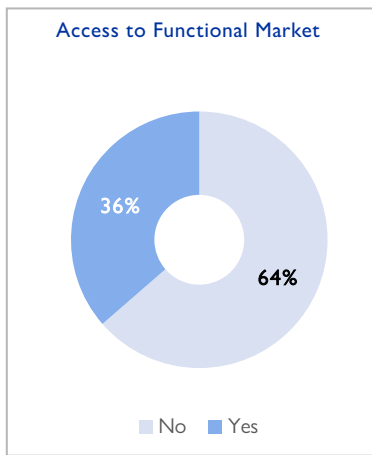

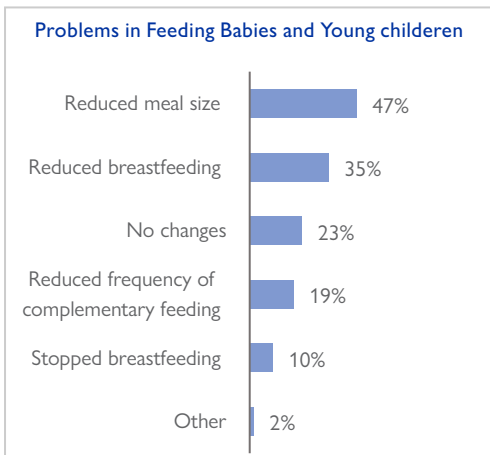

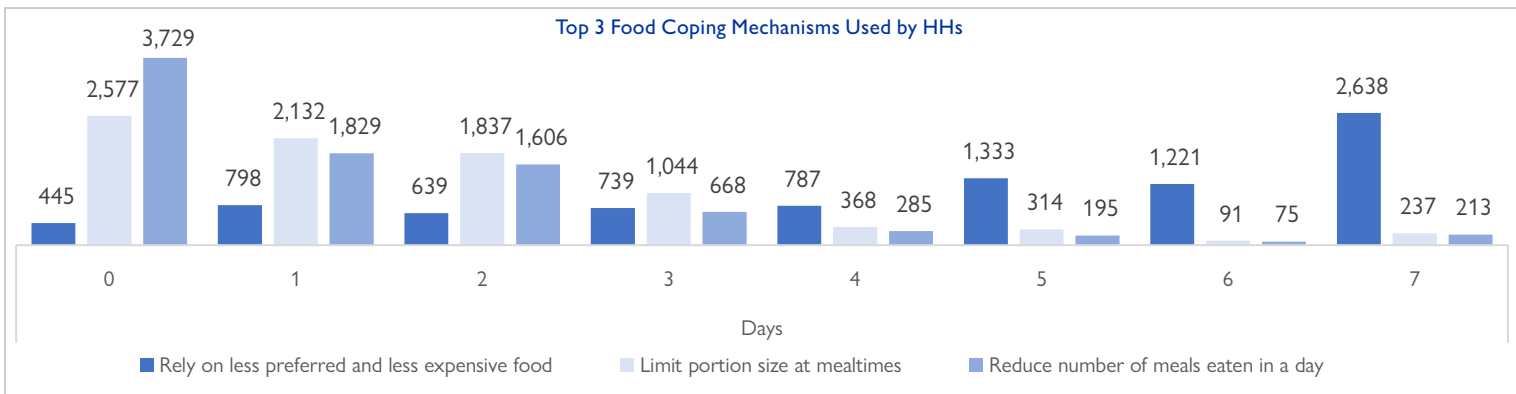

11 November 2023

The assessment of people affected by the earthquake is conducted at the household level in Herat, with an objective to identify their needs, and a specific focus on IDPs. As of 11th November, this assessment has included 4% IDPs and 96% non-IDPs impacted by the earthquakes. A comprehensive joint needs assessment is conducted by representatives from various humanitarian clusters and partner agencies, targeting the particular needs of the affected communities. Data is systematically collected and recorded through a harmonized Kobo form. Needs of IDPs were found to be similar to the needs of other populations.
