

Context: The crisis currently affecting the Lake Chad Basin states results from a complex combination of factors, including conflict with non-state armed groups, extreme poverty, underdevelopment and a changing climate, which together have triggered significant displacement of populations. As of March 2024, Cameroon, Chad, Niger and Nigeria were hosting an estimated **6,041,927 affected individuals** made up of internally displaced persons (IDPs), returnees (former IDPs and returnees from abroad) and refugees (both in- and out-of-camp). Thirteen per cent of the affected population (**775,477 individuals**) were located in **Cameroon**, while 5 per cent resided in **Chad** (**296,988 individuals**), 9 per cent in **Niger** (**513,102 individuals**) and finally, 74 per cent in **Nigeria** (**4,456,360 individuals**). Overall, the numbers show increases in IDPs (+1%) and returnees from abroad (+4%), and a decrease in refugees (-12%) since December 2023.
