FLOW MONITORING REPORT

MALI

1—30 November 2020

INTRODUCTION

In order to gain a better understanding of mobility flows and trends through West and Central Africa, the International Organization for Migration (IOM) implements the Displacement Tracking Matrix's Flow Monitoring (FM) tool at key transit points across the region.

Flow Monitoring activities are conducted in close cooperation with national and local authorities as well as local partners. The Flow Monitoring tool consists of two main components: the Flow Monitoring Registry (FMR), which captures key data on the magnitude, provenance, destination and mode of travel of mobility flows, and the Flow Monitoring Survey (FMS), individual surveys conducted with travellers to gather detailed information about the profiles, migration experience and intentions of migrants. Through these activities, the Flow Monitoring tool collects data on migration flows and trends, traveller profiles, migration journeys, and intentions of migrants, so as to obtain a better understanding of mobility in West and Central Africa.

In **Mali**, DTM conducts Flow Monitoring activities at 7 Flow Monitoring Points (FMPs) located across 6 regions, in order to foster a better understanding of the numbers, trends, profiles, and journeys of migration flows crossing these points.

This reports presents data collected through the **Flow Monitoring Registry** in **November 2020**.

Additional information on Flow Monitoring methodology is available on the last page.

KEY FIGURES

7 FMPs active in MALI

563 Travellers on average observed daily

+5% Increase in travellers compared to August

9,620 Total incoming individuals (**57%**)

7,273 Total outgoing individuals recorded (**43%**)

16,893 Total individuals observed at Mali FMPs

98% of individuals travelling to **Burkina Faso, Algeria and Mauritania**

80% of nationals from **Burkina Faso, Mali and Guinea**

TRAVELLER PROFILES AND MOBILITY TRENDS

Mobility trends: Over the course of the reporting period, 563 individuals were observed daily, at 7 active FMPs in Mali, on average. This represents a 5 per cent increase when compared to the previous month, during which 535 individuals had been observed daily. An increased movements was observed after the relaxation of travel restrictions and the end of ECOWAS sanctions.

Types of flows: Amongst observed travellers, 91 per cent were conducting a transboundary movement (57% were entering the country, while 34% were leaving the country). In contrast, 9 per cent of travellers were travelling internally.

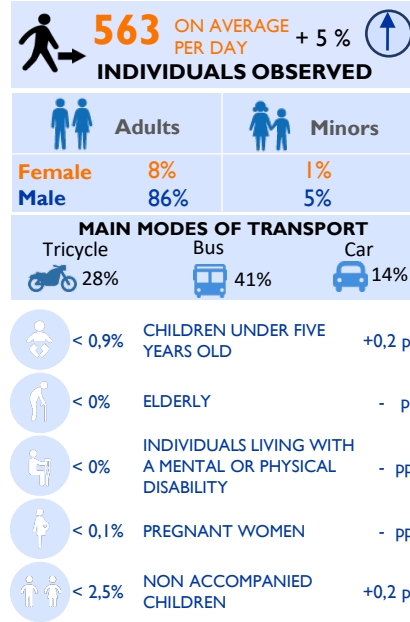

Provenance and destination: During the third quarter of 2020, the main cities of departure were Bobo-Dioulasso (19%, Burkina Faso), Ouagadougou (19%, Burkina Faso), Sikasso (17%, Mali), Bamako (14%, Mali), Nouakchott (8%, Mauritania) and Mopti (7%, Mali). Travellers were primarily headed to destinations in Bamako (34%, Mali), Bobo-Dioulasso (15%, Burkina Faso), Sikasso (14%, Mali), Ouagadougou (13%, Burkina Faso) et Tombouctou (10%, Mali). The main modes of transportation were bus (41%), tricycle (28%), private vehicle (14), truck (8%) and on moto (5%). Due to the closure of the Malian borders in response to COVID-19 and to ECOWAS sanctions, following the overthrow of the government, a significant proportion of travellers observed at Mali's FMP use tricycle and motorcycles to travel. Before these two events, the bus was the preferred means of transport for the majority of travellers.

Traveller profiles: Of all travellers, 86 per cent were adult men, while 8 per cent were adult women and 6 per cent were minors. Of all identified individuals, 592 persons presented vulnerabilities, including children under five years old, pregnant women, elderly persons, and people with a visible disability.

This map is for illustrative purposes only. Representations and the use of boundaries and geographical names on this map may include errors and do not imply any judgment on the legal status of a territory, nor official recognition or acceptance of these boundaries by IOM.

DIRECTION OF FLOWS

DAILY EVOLUTION OF FLOWS

EVOLUTION OF MIGRATION FLOWS (2016 – 2020)

Most migrants travel through the capital city, Bamako, to the strategically located towns of Gao and Timbuktu, as well as to border areas such as Benena, Gogui and Heremakono, before heading towards Algeria, Niger, Libya, Mauritania or Morocco. Some will ultimately travel on to Europe. Gao is an important transit point and is commonly favoured by migrants for its accessibility to routes leading to the Mediterranean sea. The majority of outgoing migrants identified at the Gao and Timbuktu FMPs continue through Algeria (primarily through the Algerian towns of Tamanrasset and Bordj). Migrants transiting through Benena and Heremakono travel on to Burkina Faso, while those transiting through Gogui often travel on to Mauritania. Mali is also a transit country for incoming migrants, notably those who were unable to cross the Sahara desert and those returning to countries such as Guinea-Conakry, Cote d'Ivoire, Senegal and other countries in Sub-Saharan Africa.

Following the appearance of the first cases of COVID-19 in West Africa in February 2020, public authorities decided to restrict mobility, including through the closure of borders. Migrants who do not want to defer their plans to migrate find unofficial means to cross officially closed borders despite the prohibition of people passing through. Therefore, from mid-March 2020, a progressive decrease in migratory flows was observed at the different FMPs of Mali, reaching a very low level in April 2020. However, during the months of May and June, a resumption was observed in the movement of migrants. In fact, FMPs in Mali recorded an increase in flows of 32 per cent in May and 100 per cent in June 2020. This resulted in an increased volume of flows which was higher than any period prior to COVID-19. Starting in February 2020, data collection focused on recording travellers conducting seasonal migration. As a result, the data collected reflects this focus and thus, does not represent the impact of COVID-19 on all mobility; it also explains the sharp rise in flows recorded at FMPs from February 2020 onwards.

TOTAL OF INCOMING AND OUTGOING INDIVIDUALS AT MALI FMP BETWEEN 1 JULY 2016 AND 30 NOVEMBER 2020**

(*) To avoid double counting, migrants recorded at Wabaria, an Internal Transit Point, are not included in this total. Only those recorded at entry and exit points are considered.
(**) Data collection on incoming flows at FMPs started in December 2016. New FMPs were set up in June 2017; as a result, any significant deviation observed in the figures provided from that date should not only be interpreted as an increase in migratory flows but may also be a result of an increase in data collected.

MAIN NATIONALITIES OF MIGRANTS

MAIN INTENDED DESTINATIONS

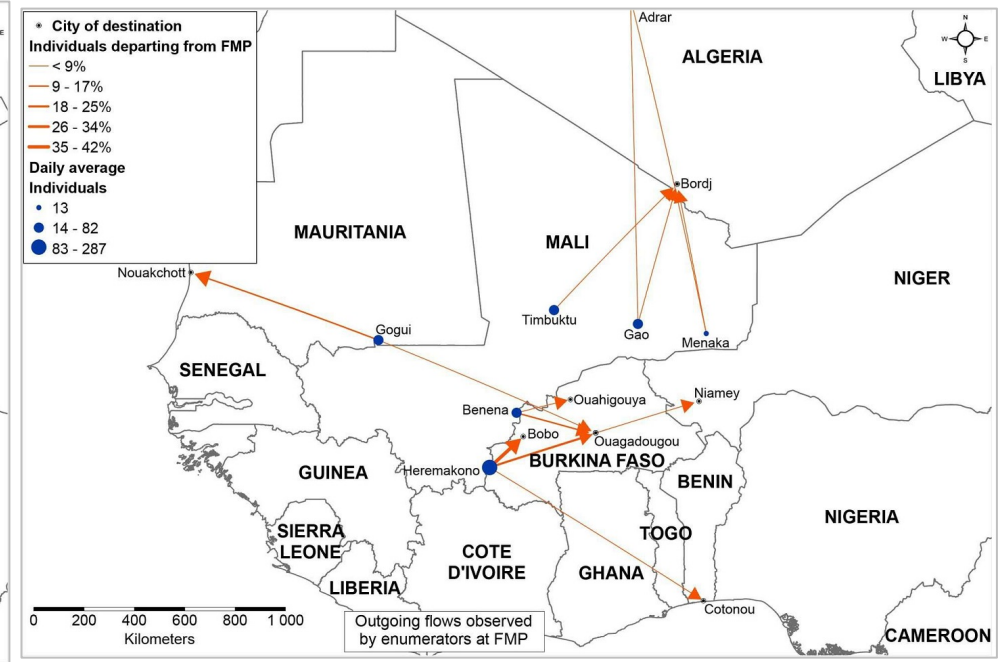

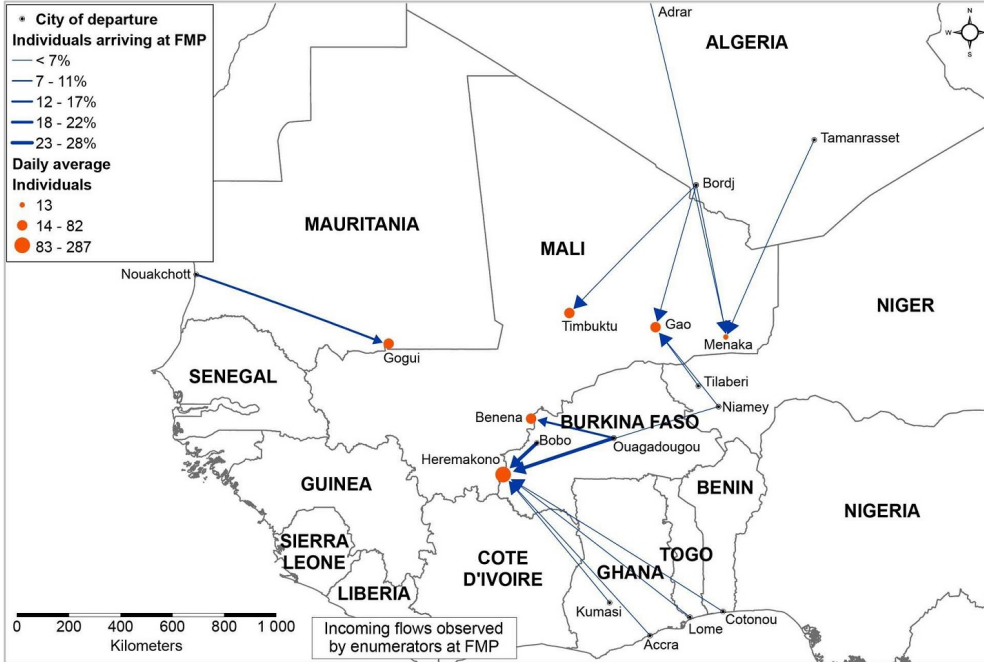

Since the beginning of 2020, the flows of seasonal migrants from Burkina Faso continue to increase significantly. These migrants most often intend to travel to gold mining sites.

European countries were declared as the final intended destination by 13 per cent of outgoing migrants.

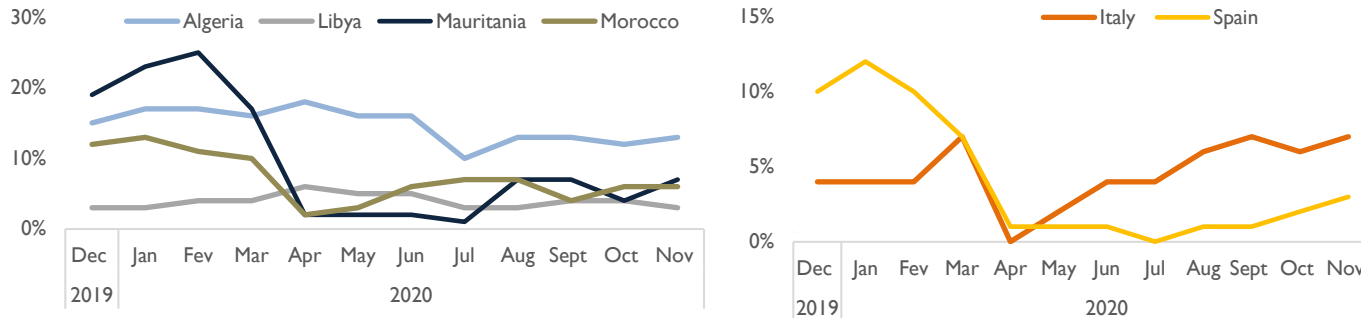

DESTINATION OF FLOWS

The data collected at the FMPs in Gao, Timbuktu and Menaka permitted to determine the migrants in the direction of Algeria. These regions are localities where migrants headed for Algeria usually begin their journey, reciprocally the migrants who return from Algeria pass there.

Base Map Source: ESRI. This map is for illustration purposes only. The depiction and use of boundaries, geographic names and related data shown on maps and included in this report are not warranted to be free of error nor do they imply judgment on the legal status of any territory, or any endorsement or acceptance of such boundaries by IOM.

EVOLUTION OF THE FINAL INTENDED DESTINATIONS: 2019 – 2020

When compared to October, the number of migrants wishing to travel to Algeria and Mauritania increased. However, the number of migrants travelling to Morocco or Libya decreased.

The number of migrants seeking to reach Italy or Spain have simultaneously increased.

It should be noted that these figures indicate the intentions of migrants rather than confirmed destinations.

GAO – WABARIA

PRESENTATION OF FMP: A Flow Monitoring Point (FMP) was set up in July 2016 in the city of Gao at the coach station of Wabaria. An FMP was installed at this location to observe movements between Gao and Bamako, as well as movement to and from other destinations, including the N'Tahaka gold mining site, Adrar (Algeria) and Bordj-Bou-Arreridj (Algeria).

Mobility trends: Over the reporting period, 158 individuals were observed daily, on average, at the Wabaria FMP. This represented an increase of 27 per cent since the previous month, during which 124 individuals had been observed. The high level of the daily average in Wabaria is due to the focus on the registration of seasonal migrants. A few months ago, an influx of people, especially young men, were observed heading in the direction to a gold-panning site recently discovered in the village of N'tahaka, located south of Gao.

Types of flows: Amongst observed individuals, 37 per cent were conducting a cross-border movement (exclusively incoming flows from Niger), while 63 per cent were travelling internally.

Provenance and destination: During the third quarter of 2020, the main provenance cities of migrants were Gao (70%), N'tahaka (16%) and Bamako (14%). They were primarily headed to destinations N'tahaka (53%), Gao (43%) et Adrar in Algeria (3%). There is currently a large inflow of young people to the village of N'tahaka following the discovery a few months ago of a gold panning site. The persons observed travelled mainly by private vehicle (51%), truck (39%) and bus (10%).

Traveller profiles: Among the travellers observed, 95 per cent were adult males, while one per cent were adult females and four per cent were minors. Persons with vulnerabilities were identified (177). Among these cases of vulnerabilities, the vast majority was unaccompanied minors (those under 18 years of age and over 5 years of age).

During the reporting period, most migrants transiting through the Wabaria FMP were nationals of Niger (74%), Burkina Faso (8%), Mali (9%), Sudan (5%), Côte d'Ivoire (3%) and Guinea-Conakry (3%).

DAILY MOVEMENTS

GAO – PLACE KIDAL

PRESENTATION OF FMP: Place Kidal is primarily an exit point for migrants passing through the city of Gao. From July 2016, a Flow Monitoring Point (FMP) was installed at this location, where IOM observes the movements of travellers going mainly to and from from Gao, Niamey (Niger), Tillaberi (Niger), Bordj-Bou-Arreidj (Algeria) and Adrar (Algeria).

Mobility trends: Over the reporting period, 48 individuals were observed daily, on average, at the Place Kidal FMP. This represented a decrease of 2 per cent since the previous month, during which 49 individuals had been observed. This decrease in flows is the result of the reduction in movements during the last week of November 2020.

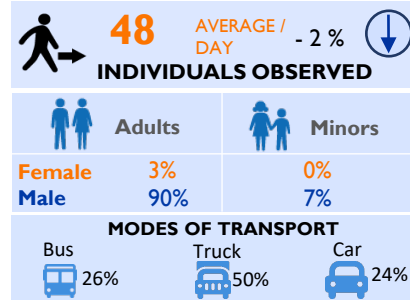

Types of flows: Amongst observed individuals, 95 per cent were conducting a cross-border movement (incoming flow: 62% and outgoing flow: 33%), while five were travelling internally.

Provenance and destination: In the third quarter of 2020, the main cities of origin of travellers were Gao (47%), Niamey (32%, Niger), Bordj-Bou-Arreidj (7%, Algeria) and Tillaberi (6%, Niger). They were primarily headed to destinations Gao (59%), Bordj-Bou-Arreidj (24%, Algeria), N'tahaka (10%) and Adrar (7%, Algeria). The persons observed travelled mainly by truck (50%), bus (26%) and private vehicle (24%).

Traveller profiles: Registered migrants were 90 per cent of adult men, while three per cent were adult women and seven per cent were minors. Of these, 104 individuals were vulnerable, exclusively unaccompanied minors.

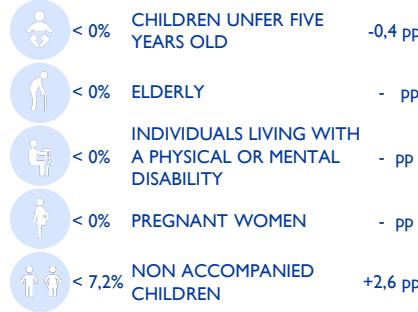

During the reporting period, most migrants identified at Place Kidal FMP were nationals of Niger (33%), Mali (22%), Côte d'Ivoire (14%), Guinea-Conakry (13%) and Senegal (3%).

DAILY MOVEMENTS

TIMBUKTU

PRESENTATION OF FMP: From January 2017, a Flow Monitoring Point was set up in the city of Timbuktu. At this point, enumerators usually identify migrants who travelling to and from Mopti, Bordj-Bou-Argeridj (Algeria). Some pass-through Timbuktu and continue to the countries of North Africa and Europe.

Mobility trends: Over the reporting period, 65 individuals were observed daily, on average, at the Timbuktu FMP. This represented a decrease of four per cent since the previous month, during which 68 individuals had been observed, daily.

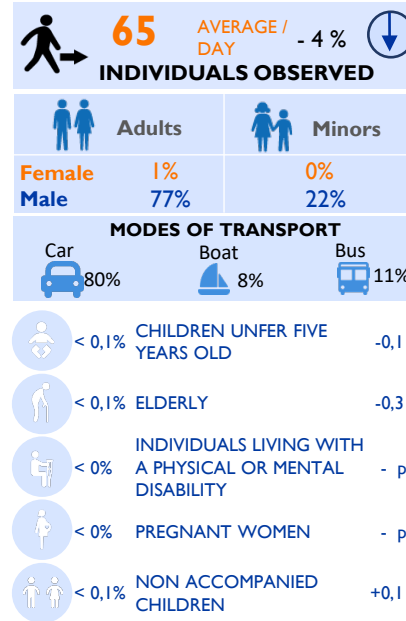

Types of flows: Amongst observed individuals, 20 per cent were conducting a cross-border movement (incoming flow: 19 per cent and outgoing flow: one per cent), while 80 per cent were travelling internally.

Provenance and destination: In the third quarter of 2020, the main cities of provenance of travellers were Mopti (66%, Mali), Bordj-Bou-Argeridj (23%, Algeria) et Sevre (8%, Mali). Almost all registered travellers were to Timbuktu (96%, Mali). Some mentioned Bordj-Bou-Argeridj (2%, Algeria) and Mopti (2%, Mali) as destinations. The persons observed travelled mainly by private vehicle (80%), boats (8%) or bus (11%).

Traveller profiles: The vast majority (77%) of observed travellers were adult males, while one per cent were adult females and 22 per cent were minors. Of these, four persons with vulnerabilities were identified, one of whom, was a child under five years of age and one elderly person was also seen.

During the reporting period, most migrants identified at the Timbuktu FMP were nationals of Guinea-Conakry (38%), Mali (21%), Sierra Leone (8%), Gambia (7%) and Senegal (6%).

MENAKA

PRESENTATION OF FMP: A Flow Monitoring Point was installed in December 2017 in the city of Menaka. At the Menaka FMP, IOM data collectors observe the movements of migrants in transit between Menaka and Adrar or Bordj-Bou-Arreidj (Algeria).

Mobility trends: Over the reporting period, 13 individuals were observed daily, on average, at the Menaka FMP. This represented an increase of 86 per cent since the previous month, during which 7 individuals had been observed, daily.

Types of flows: All observed individuals were conducting a cross-border movement (incoming flow: 28% outgoing flow: 72%).

Provenance and destination: During the third quarter, the main cities from which travellers came were Bamako (32%, Mali), Gao (10%, Mali), Bobo-Dioulasso (9%, Burkina Faso), Ouagadougou (8%, Burkina Faso), Sikasso (7%, Mali), Mopti (7%, Mali), Nouakchott (6%, Mauritania), Bordj-Bou-Arreidj (5%, Burkina Faso) and Niamey (3%, Niger). Their main destinations were Bamako (23%, Mali), Gao (15%, Mali), Timbuktu (13%, Mali), Nouakchott (9%, Mauritania), Ouagadougou (8%, Mali), Bobo-Dioulasso (7%, Burkina Faso), Bordj-Bou-Arreidj (7%, Algeria) and Sikasso (7%, Mali). All the migrants registered in Menaka (100%, Mali) travelled by truck.

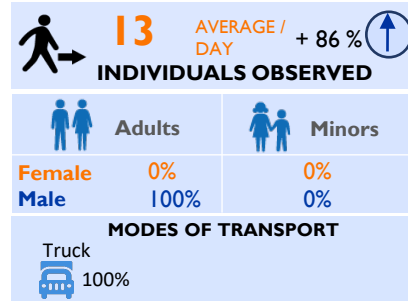

Traveller profiles: All travellers observed at the Menaka FMP (100%) were adult males. None of the registered travellers showed any evidence of vulnerability. There were no children under the age of five, pregnant women, elderly individuals or unaccompanied minors observed.

During the reporting period, most migrants identified at Menaka were Malian nationals (36%), followed by nationals of the Mali (33%), Niger (28%), Nigeria (16%), Ghana (12%) and Benin (5%).

MONTHLY EVOLUTION OF FLOWS

GOGUI

PRESENTATION OF FMP: The Gogui Flow Monitoring Point is located on the border post between Mali and Mauritania. It was set up in June 2017. The migrants identified in this FMP go mainly to Mauritania and Morocco. Some of travellers reported they want to work in these countries in order to get enough funds to continue to Europe. Enumerators at this FMP also record migrants returning to Mali from Mauritania or transiting through Mauritania and Mali to reach their home countries. Travellers crossing Gogui primarily travel between Bamako and Nouakchott (Mauritania).

Mobility trends: Over the reporting period, 68 individuals were observed daily, on average, at the Gogui FMP. This represented an increase of 28 per cent since the previous month, during which 53 individuals had been observed. There is a resumption of movements after the reopening of the Malian borders. A significant number of rejected migrants were recorded during the data collection period.

Types of flows: All observed individuals in Gogui FMP were conducting a cross-border movement (incoming flow: 70% outgoing flow: 30%).

Provenance and destination: During the third quarter, the cities from which travellers came were Nouakchott (75%, Mauritania), Bamako (24%, Mali) and Nioro de Sahel (1%, Mali). They travelled mainly to Bamako (75, Mali), Nouakchott (24%, Mauritania). The people observed were travelling mainly by buses (36%), motorcycles (40%), on foot (16%) and private vehicles (8%). With the closure of the borders, motorcycles are very often used crossing. Some prefer to cross them on foot.

Traveller profiles: Of the travellers observed, 74 per cent were adult males, while 20 per cent were adult females and six per cent were minors. It notes the presence of persons with vulnerabilities (91 individuals), with mainly children under five. There were also pregnant women and individuals living with a physical or mental disability observed among them.

During the reporting period, migrants identified in Gogui were mostly Malian nationals (88%). Nationals from Côte d'Ivoire (3%), Burkina Faso (3%) and Guinea-Conakry (2%) were also observed.

MONTHLY EVOLUTION OF FLOWS

BENENA

PRESENTATION OF FMP: The Benena Flow Monitoring Pont is located on the border post between Mali and Burkina Faso, in the Segou region. It was installed in August 2016. Travellers observed at this FMP travel mainly between Ouagadougou (Burkina Faso) and Bamako, transiting through Benena on the way.

Mobility trends: Over the reporting period, 82 individuals were observed daily, on average, at the Benena FMP. This represented an increase of 55 per cent since the previous month, during which 53 individuals had been observed, daily. A large number of seasonal migrants has been observed in particular nationals of Niger who come to work in gold mining sites. In addition, many migrants choose to pass through Benena over Heremakono.

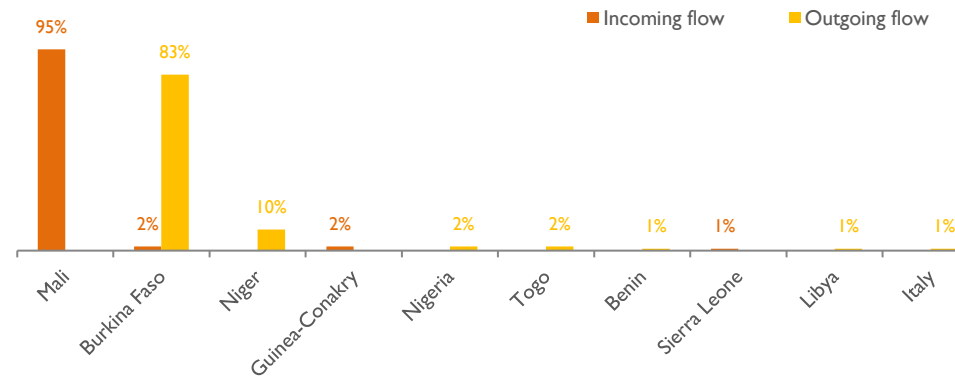

Types of flows: All observed individuals in Benena FMP (100%) carried out a cross-border movement (incoming flow: 63% outgoing flow: 37%).

Provenance and destination: The cities of provenance of the travellers registered in Benena during the third quarter of 2020 are Ouagadougou (57%, Burkina Faso), Bamako (40%, Mali) and Ouahigouya (3%, Burkina Faso). Their destinations were Bamako (60%, Mali), Ouagadougou (38%, Burkina Faso) and Ouahigouya (2%, Burkina Faso). Most of the people observed travelled by bus (93%) and by private vehicles (7%).

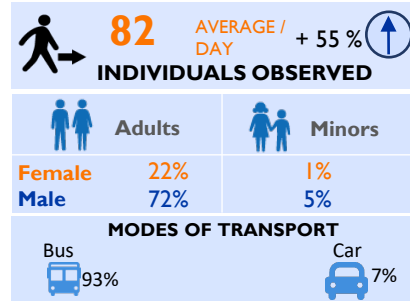

Traveller profiles: Of the travellers observed, 72 per cent were adult males, while 22 per cent were adult females and six per cent were minors. Some of them (124 people) had vulnerabilities. They were almost all unaccompanied minors.

During the reporting period, most migrants identified at Benena were nationals of Burkina Faso (74%), Niger (9%), Mali (8%) and Nigeria (5%). The flows of seasonal migrants from Burkina Faso are very important in Benena. They generally come to Mali for agricultural activities or traditional gold mining, and often return to Burkina Faso after having worked for some time in Mali.

HEREMAKONO

PRESENTATION OF FMP: The Heremakono Flow Monitoring Point is located on the border post between Mali and Burkina Faso in the Sikasso region. It has been operational since August 2017. IOM enumerators register travellers mainly to and from Bobo-Dioulasso (Burkina Faso), Sikasso, Ouagadougou (Burkina Faso) and Bamako.

Mobility trends: Over the reporting period, 287 individuals were observed daily, on average, at the Heremakono FMP. This represented a decrease of 6 per cent since the previous month, during which 306 individuals had been observed.

Types of flows: All observed individuals in Heremakono border post (100%) were conducting a cross-border movement (incoming flow: 53% outgoing flow: 47%).

Provenance and destination: During the third quarter 2020, the main cities of origin mentioned by travellers were Bobo-Dioulasso (32%, Burkina Faso), Sikasso (29%, Mali), Ouagadougou (23%, Burkina Faso) and Bamako (12%, Mali). Their main destination was Bamako (34%), Bobo-Dioulasso (25%), Sikasso (24%) and Ouagadougou (15%). Most of the people observed travelled in tricycle (55%) and bus (38%). Some travelled by truck (3%).

Traveller profiles: Of the identified travellers, 93 per cent were adult males, while four per cent were adult females and three per cent were minors. Among travellers, 269 persons with vulnerabilities were identified, including in majority unaccompanied minors, children under five years and pregnant women.

During the reporting period, most migrants identified at Heremakono were nationals of Burkina Faso (85%); National of Mali (3%) and Niger (2%) were also seen.

DIRECTION OF FLOWS

MONTHLY EVOLUTION OF FLOWS

INTRODUCTION: Flow Monitoring, a tool of IOM's Displacement Tracking Matrix (DTM), was set up to provide a better understanding and an overview of mobility through West and Central Africa, through the collection of key data on the magnitude, provenance and destination and profiles of flows in areas of high mobility throughout the region.

METHODOLOGY: Flow Monitoring is a data collection activity which seeks to gather key information on mobility. It begins by identifying zones in which large mobility flows and highlighting the characteristics and journeys of travellers in these zones. Areas of high mobility are identified with the help of national authorities. DTM teams, with the support of local authorities and partners, then identify strategic points of transit, at which Flow Monitoring Points (FMPs) are set up. At each FMP, DTM conducts two main activities: Flow Monitoring Registry (FMR) and Flow Monitoring Surveys (FMS).

The **FMR** collects data at FMP through direct observation and interviews with key informants, including staff working at coach stations, border patrol officers, local authorities, bus drivers or travellers themselves. The FMR gathers data on the number of travellers crossing FMPs, as well as the provenance, next destination, vulnerabilities and means of transport of travellers.

At each FMP, data is collected by a team of enumerators. Data collection is carried out daily, all the day, with a focus on vehicle transit times. This corresponds to the peak hours of mobility. Enumerators collect data via a form filled out thanks to information provided by key informants or gathered through direct observation.

LIMITS : Data collected in the framework of Flow Monitoring activities are the result of direct observations and interviews conducted at FMPs. The data is not representative of all migration flows in the country, and, because they only reflect the situation of observed or surveyed individuals, cannot be generalized. Temporal coverage of the data collection exercises is also limited to a specific time window. While data is collected daily, Flow Monitoring activities do not capture all flows transiting through FMPs. In this period of COVID-19, some migrants are using bypasses. These can escape the recording device.

DEFINITIONS:

Incoming flow: refers to migrants who arrive at a Flow Monitoring Point with the intention of travelling further into Mali.

Outgoing flow: refers to migrants who arrive at a Flow Monitoring Point with the intention of travelling towards the outer borders of Mali.

Internal flow: refers to migrants who arrive at a Flow Monitoring Point with a departure in Mali and the intention of travelling within Mali.

Migrant:

An umbrella term, not defined under international law, reflecting the common lay understanding of a person who moves away from his or her place of usual residence, whether within a country or across an international border, temporarily or permanently, and for a variety of reasons. The term includes a number of well-defined legal categories of people, such as migrant workers; persons whose particular types of movements are legally-defined, such as smuggled migrants; as well as those whose status or means of movement are not specifically defined under international law, such as international students.

The opinions expressed in the report are those of the authors and do not necessarily reflect the views of the International Organization for Migration (IOM). The designations employed and the presentation of material throughout the report do not imply the expression of any opinion whatsoever on the part of IOM concerning the legal status of any country, territory, city or area, or of its authorities, or concerning its frontiers or boundaries. IOM is committed to the principle that humane and orderly migration benefits migrants and society. As an intergovernmental organization, IOM acts with its partners in the international community to: assist in the meeting of operational challenges of migration; advance understanding of migration issues; encourage social and economic development through migration; and uphold the

human dignity and well-being of migrants.

The maps displayed in this report are for illustration purposes only. The depiction and use of boundaries, geographic names and related data shown on maps and included in this report are not warranted to be error free nor do they imply judgment on the legal status of any territory, or any endorsement or acceptance of such boundaries by IOM.
