TABLE OF CONTENTS

KEY FINDINGS

This summary presents findings of the 19th round of Mobility Tracking Assessments (previously known as Baseline Assessments) conducted across Northern and Central Mozambique through key-informant assessments and group interviews at location level between July and August 2023. Mobility Tracking assessments estimate the presence of internally displaced persons (IDPs) and returnees across Mozambique. IOM DTM mapped a total of 850,599 IDPs and 571,468 returnees in 325 locations. Overall increase on the number of IDPs and Returnees is attributable to the widened coverage. Comparing with previous assessments which covered only Northern Mozambique, the July-August 2023 assessment was widened to cover Manica, Sofala, Tete and Zambezia provinces.

IDPs IN MOZAMBIQUE

SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of IDPs in the region may face diverse disabilities ranging from physical, cognitive, sensory to psychological impairments, mobility tracking assessments estimate 136,096² individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

PERCENTAGE INCREASE IN IDPs SINCE APRIL 2023

0.02%*

Increase in the number of displaced individuals from April 2023 (Round 18) in Mozambique. However, in Northern Mozambique 668,939 IDPs were recorded representing 20% decrease from Round 18 which recorded 834,304 IDPs.

²Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022).

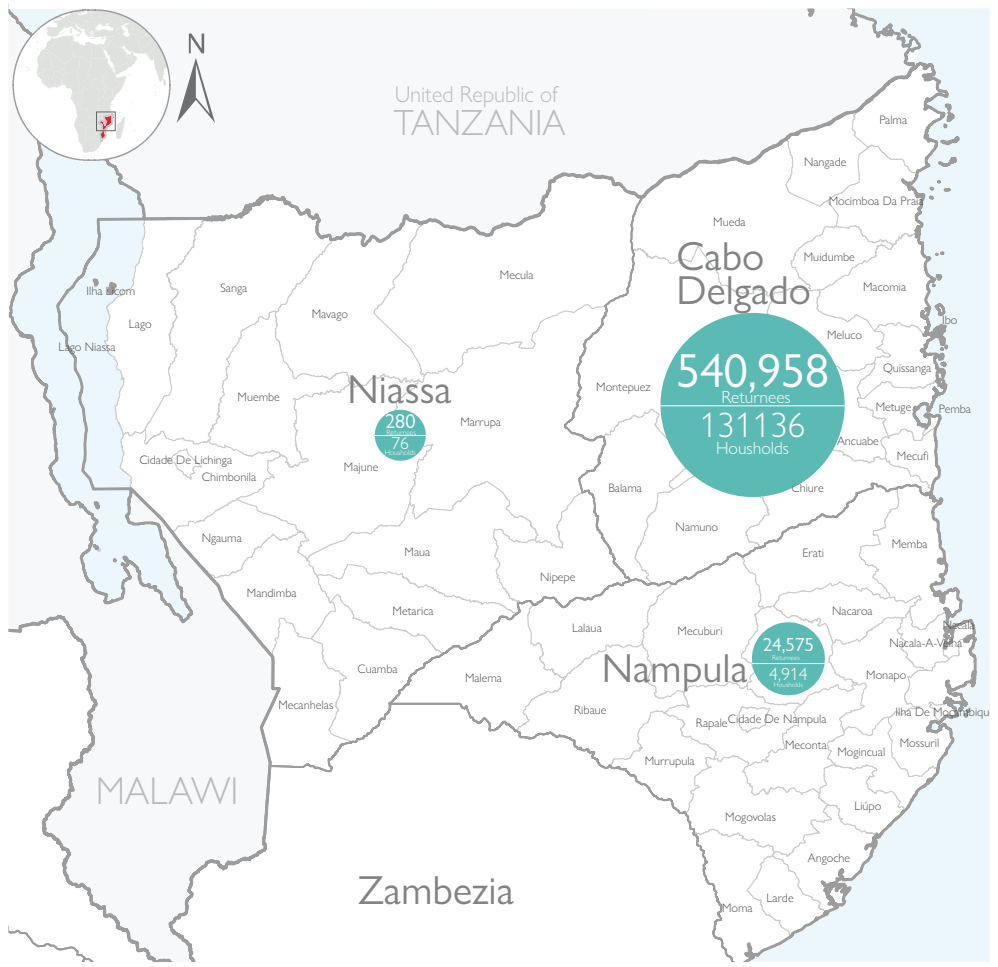

*Previous rounds solely encompassed Northern Mozambique IDP totals whilst the Mobility Tracking round 19 (R19) incorporates locations hosting IDPs across 4 additional provinces.

GRAND TOTAL	49,907	143,333	352,437	420,200	571,468

Noting that a significant number of Returnees in the region may face diverse disabilities ranging from physical, cognitive, sensory to psychological impairments, mobility tracking assessment estimate 91,451³ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

INTERNALLY DISPLACED PERSONS

Persons who have been forced or obliged to flee or to leave their homes or places of habitual residence because of armed conflict, situations of generalized violence, violations of human rights or natural or human made disasters and who have not crossed an internationally recognized State border. For the purposes of Mobility Tracking, the presence of IDPs can also be sub-categorized into individuals identified who are present in their district of origin. IDPs in Mozambique are located in host community and displacement site settings.

DEFINITIONS OF INTERNALLY DISPLACED PERSONS AND RETURNEES

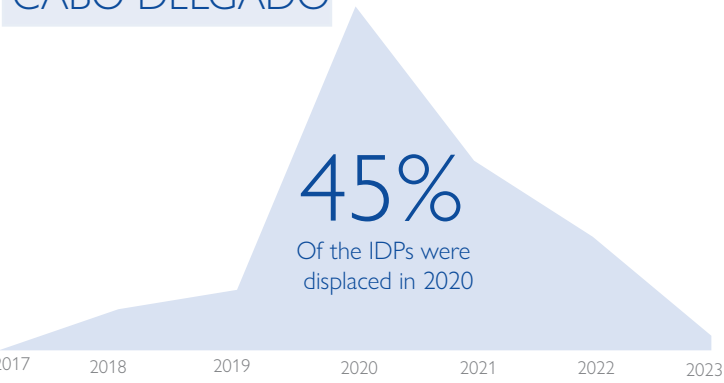

RETURNEES

Persons who have returned from displacement areas to their community of origin or former habitual residence, spontaneously or in an organised fashion, with the intention of remaining there permanently and who is yet to be fully integrated. For the purposes of Mobility Tracking, the presence of Returnees is identified by individuals who are present in location origin/habitual residence. Multi-sectoral needs and the sustainability of return requires further assessment.

³Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

DISPLACEMENT AND RETURN IN CABO DELGADO

A total of 627,846 IDPs were identified across 15 districts in Cabo Delgado. While the province observe an overall net decrease of IDPs from the Mobility tracking round 18, IDPs in Mueda and Nangade region face long term displacement, triggered by conflict, as majority have been displaced since 2019 or earlier from surrounding districts of Muidumbe, Palma and Mocimboa da Praia. Forty three per cent of the IDPs have been displaced at least three times whilst 28 per cent had been displaced twice and 28 per cent had been displaced for the first time. Mobility Tracking teams recorded an estimated presence of 114,709 IDPs present in their district of origin (representing an estimate 18 per cent of all IDPs in Cabo Delgado). Approximately 63 per cent (396,741) of all IDPs in the province are hosted in urban/peri-urban settings. Cidade De Pemba, Metuge and Mueda district hosts the largest number of IDPs for the region (317,902 IDPs). Source of income was recorded as the highest humanitarian need in the region, followed by non-food items and shelter. In previous round the top needs have always been either food or shelter.

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of IDPs and returnees in the province may face diverse disabilities ranging from physical, cognitive, sensory to psychological impairments, mobility tracking assessment estimate 187,009⁴ individuals who could potentially have a disability.

ESTIMATED NUMBER OF IDPs PRESENT IN THEIR DISTRICTS OF ORIGIN

18% (114,971)

REPORTED PRIORITY NEEDS OF IDPs IN CABO DELGADO

To address the priority needs of IDPs, Key Informants were asked to rank the relative intensity of each sectoral need on a Likert scale. The following graph presents this data, by aggregating the data for all assessed localities in Cabo Delgado and presenting an average “need” between 0 (not applicable) to 5 (very significant). For the sectoral needs of individual localities, please consult the Mobility Tracking Dataset (Round 19).

IDPs LIVING IN HOST COMMUNITIES AND DISPLACEMENT SITES

An estimated 131,136 households with 540,958 returnees were additionally identified in the districts of Cabo Delgado during this data collection round. This represents an increase of 38 per cent from 391,785 to 540,958 returnees reported in previous Mobility Tracking Assessments (April 2023). Consistent with movement trends observed between April 2023 – July 2023, the highest number of returnees recorded during this data collection round were identified in Mocimboa da Praia (176,174 returnees) followed by Palma (116,016 returnees) and Muidumbe (58,887 returnees). Overall, 21 per cent of the returnee population are adult men, 31 per cent adult women, whilst 48 per cent are children. Indicative group interviews with Key Informants additionally reported the reasons of return to include a.) place of origin is safe now; b.) secure land to cultivate crops at place of origin and c.) re-unite with family.

MAIN REASONS OF RETURN IN CABO DELGADO

DISPLACEMENT AND RETURN IN NAMPULA PROVINCE

In Nampula, 36,383 IDPs were identified across 20 districts and all the IDPs are displaced outside their districts of origin. While the province observes an overall net decrease of IDPs from previous rounds, a majority of IDPs in the region remain in displacement since 2020 and 86 per cent have been displaced more than once. Approximately 53 per cent of all IDPs in the region are hosted in urban/peri-urban with 47 per cent living in rural settings. Whilst conflict has been the major causes of displacement in Nampula province, some IDPs in Memba were displaced due to natural disasters and food insecurity. Financial support was recorded as the highest humanitarian need in the province, followed by food and source of income.

PRIORITY NEEDS

⁵Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

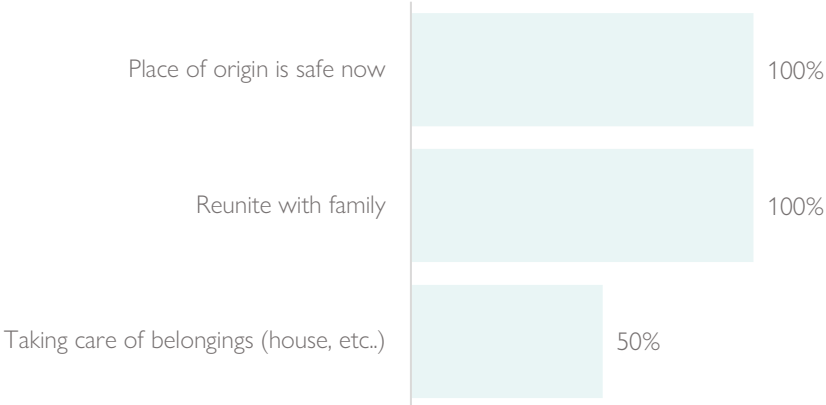

An estimated 24,575 Returnees have been identified in the Nampula province during this data collection round. This represents an decrease from 27,389 to 24,575 returnees reported in previous Mobility Tracking assessment (April 2023). Consistent with movement trends observed between April – July 2023, the returnees recorded during this data collection round were identified in Memba district (13,757 returnees) followed by Erati district (10,818 returnees). Overall, 16 per cent of the returnee population are adult men, 29 per cent adult female, and 55 per cent are children. Indicative group interviews with Key Informants additionally reported the reasons of return to include a.) Place of origin is safe now; b.) Reunite with family, and c.) Taking care of belongings. Among the returnees, Food is recorded as the highest humanitarian need in the region, followed by WASH, Access to documents, non-food items and financial support.

RETURNEES - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of returnees in the province may face diverse disabilities, mobility tracking assessment estimate 3,932⁶ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

MAIN REASONS OF RETURN IN NAMPULA

⁶Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

DISPLACEMENT AND RETURN IN NIASSA PROVINCE

In Niassa, 4,710 IDPs were identified across 15 districts. This represents an 18 per cent increase compared to the round 18. Whilst conflict is the major cause of displacement, a majority of IDPs in Cuamba and Lago face protracted displacement, triggered by disaster, and are displaced within their respective districts. Ninety-two per cent of the IDPs have been displaced for the first time due to conflict between 2020 and 2023, of which 30 per cent were displaced in 2023. Approximately 22 per cent of all IDPs in the region are hosted in urban/peri-urban with 78 per cent living in rural settings. Financial support was recorded as the highest humanitarian need in the region, followed by source of income and food.

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of IDPs in the region may face diverse disabilities, mobility tracking assessment estimate 753⁷ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

⁸Including new sites assessed in 2023 following Tropical Storm Freddy.

An estimated 280 Returnees have been identified in the Niassa province during this data collection round. All the returnees recorded during this data collection round were identified in Mecula district. Overall, 20 per cent of the returnee population are adult men, 26 per cent adult women, and 54 per cent are children. Indicative group interviews with Key Informants additionally reported the reasons of return to include a.) Place of origin is safe now; b.) Secure land and cultivate crops at place of origin; c.) Reunite with family; and d.) Taking care of belongings. Among the returnees, Food is recorded as the highest humanitarian need in the region, followed by WASH, Access to documents, Non-food items and financial support. All of the returnees recorded arrived between the January and May 2022.

RETURNEES - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of returnees in the province may face diverse disabilities, mobility tracking assessment estimate 45⁹ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

¹¹Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

DISPLACEMENT AND RETURN IN ZAMBEZIA PROVINCE

In Zambezia, 21,769 IDPs were identified across seven (7) districts, of which 45 per cent are displaced within their districts of origin. Nicoadala district hosts 51 per cent of the IDPs recorded in Zambezia. Maganja De Costa, Namacura and Nicoadada districts were significantly impacted by cyclones, heavy rain and winds within the reporting year. Ninety-seven per cent have been displaced for the first time and 48 per cent of all IDPs were displaced in 2023. Approximately eight per cent of all IDPs in the region are hosted in urban/peri-urban with 92 per cent living in rural settings. Financial support was recorded as the highest humanitarian need in the province, followed by source of income and food.

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

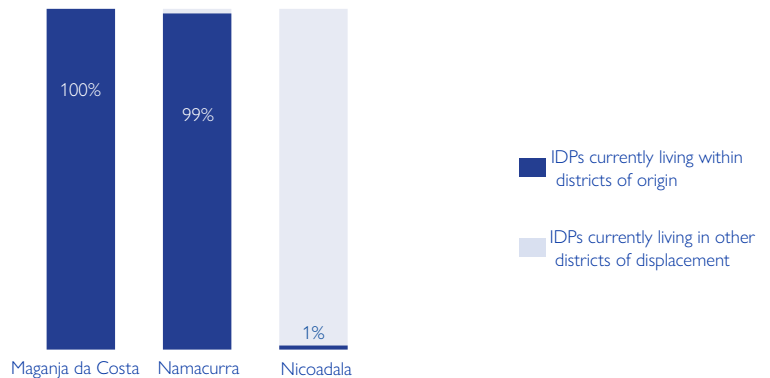

Noting that a significant number of IDPs in the province may face diverse disabilities, mobility tracking assessment estimate 3,483¹³ individuals who could potentially have a disability. Persons with disabilities disproportionately affected by disaster and conflict underscores the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

DISPLACEMENT AND RETURN IN MANICA PROVINCE

In Manica, 29,602 IDPs were identified across Gondola and Sussundega districts. Whilst all the IDPs have been displaced once due to disasters, 79 per cent were displaced in 2019, 17 per cent were displaced in 2020 and the remaining were displaced between 2021 and 2023. Approximately four per cent of all IDPs in the region are hosted in Urban/Peri-urban with 96 per cent living in rural settings. Financial support was recorded as the highest humanitarian need in the region, followed by adult education and source of income.

DISPLACEMENT AND RETURN IN TETE PROVINCE

In Tete, 2,152 households with 8,950 IDPs were identified across two (2) districts. All the IDPs had been displaced for the first time due to disasters and are residing within their districts of origin. Forty-seven per cent were displaced in 2019. Approximately 65 per cent of all IDPs in the region are hosted in urban/peri-urban with 35 per cent living in rural settings. Source of income was recorded as the highest humanitarian need in the region, followed by food and Water, Sanitation and Hygiene (WASH).

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of IDPs in the province may face diverse disabilities, mobility tracking assessment estimate 1,432¹² individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

METHODOLOGY

The data in this report is collected through DTM's Mobility Tracking Tool. Mobility Tracking gathers data through key informants at both district and community level on a quarterly data collection cycle and includes a Multi-Sectoral Location Assessment (MSLA) component that gathers multisectoral data at Displacement Site level. A comprehensive methodological note on DTM's Mobility Tracking component is available on the DTM Mozambique website. In Round 19 DTM assessed 325 communities in Northern and Central Mozambique. A total of 368 key informant interviews (KIIs) were conducted during this round. Ninety per cent KIIs were with representatives from various divisions of district and local governments, five per cent were from civil society organizations/non-government agencies and five per cent from technical focal points in various sectors. Twenty seven per cent of KIIs were with women key informants, whereas 73 per cent were men. Ninety five per cent of locations were assessed physically (enumerators within radius of 1Km from the affected location). Approximately five per cent of locations were assessed remotely (owing to access or security constraints).

To address the priority needs of IDPs, Key Informants have been asked to rank the relative intensity of each sectoral need on a Likert scale. The priority needs graphs presents this data, by aggregating the data for assessed localities in respective districts and presenting an average "need" between 0 (not applicable) to 5 (very significant).

For the sectoral needs of individual localities, please consult the Mobility Tracking Dataset (Round 19).

LIMITATIONS AND CHALLENGES:

The DTM's methodology of Mobility Tracking generates best estimates of IDPs as per their locations of displacement through key informant (KI) interviews, headcounts conducted in select Displacement Sites as well as verified data through IDP registration where available. However, disaggregated figures of IDP and Returnee populations has limitations. Within the returnee population categories assessed, assessment on intentions, perceptions, access to services/livehoods and the sustainability of return requires further assessment. Despite the observed presence of returns in newly accessible locations, mobility of displaced populations remains dynamic between host communities and sites. Humanitarian needs in access to livelihood/food, health, shelter, non-food items, education as well as water, sanitation and hygiene remain relevant amongst assessed IDP and returnee populations. Where IDP estimates increase/decrease over 25% from a previous Mobility Tracking Assessment round, verification is made through DTM Methodologies (Population Count exercises in Displacement Site Settings and additional household-level verification for IDPs in Host-community settings).

On some occasions demographic percentages are slightly below or above 100 per cent due to rounding in calculations.

ABOUT DISPLACEMENT TRACKING MATRIX

DTM has implemented the Mobility Tracking Assessments in Mozambique since 2020 to track mobility, provide information on displaced population estimates, locations and geographic distribution of displaced and returned populations, reasons for displacement, places of origin and periods of displacement. Data is collected at the settlement level, through Key Informants and focus group discussions with community focal points and direct observations. Vulnerabilities and multi-sectoral needs are covered in the Multi-Sectoral Location Assessment report (MSLA), released in conjunction with this report.
