

KEY FIGURES

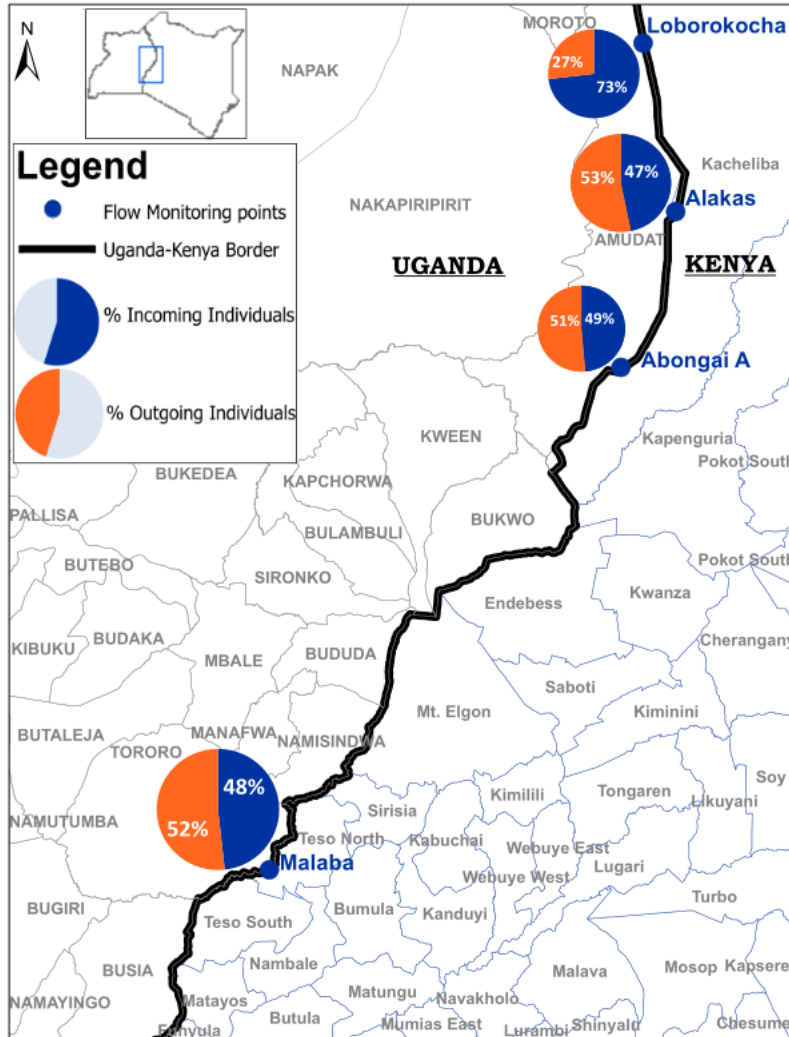

OVERVIEW

In November 2022, a total of 2,833 people were interviewed at four Flow Monitoring Points (FMPs) across the border between Uganda and Kenya. Similar to the previous period, more people interviewed were incoming into Uganda (52%) than outgoing to Kenya (48%). Lolorokocha has proportionately almost 1 in 3 incoming because it's the access point to areas with grazing land, arable land for cultivation, and cheaper products.

Indicators highlighting potential protection risks included lack of accommodation arranged at destination (60%) followed by requirement to repay expenses of journey (30%), migrants with no identification document (27%), job offers lined up at destination (15%) and requirement to repay recruitment fees (<1%). Information sources about cross-border job offers were mostly friends, relatives or community in either departure or destination (72%). Almost 3 per cent of people interviewed declared having separated from their spouse.

INCOMING AND OUTGOING MOVEMENTS BY FMP IN THE UGANDA - KENYA BORDER

DEMOGRAPHICS

NATIONALITY

MARITAL STATUS BY AGE

HIGHLIGHTS

- More than half of the people interviewed were Kenyans (53%) while 43 per cent were Ugandans and the remaining 4 per cent migrants from other nationalities.
- Almost 61 per cent of outgoing movement was for economic reasons.
- Access to services (e.g. health, food, water) was a larger driver among people leaving Uganda for Kenya (8%) than among those incoming (5%).
- There is a significant gender gap in employment as 79% of respondents reporting being employed were male against only 21% being female.
- 30% of outgoing movements to Kenya are destined for Urban areas as compared to 68% destined for rural (e.g. villages or settlement) and almost 2 per cent were not sure.

HIGHEST LEVEL OF EDUCATION OF POPULATION TRACKED AT FMP

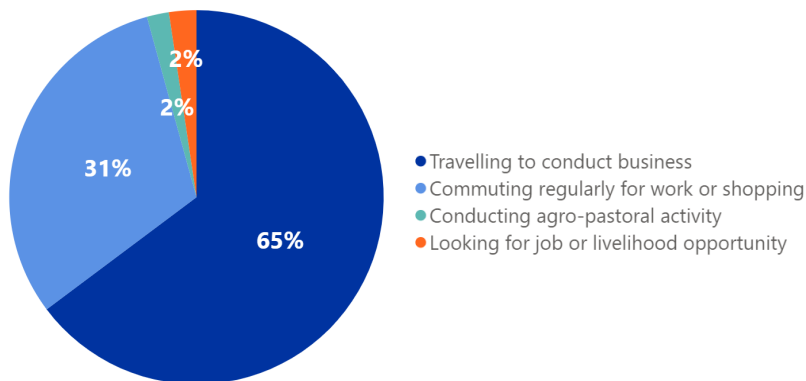

REASONS FOR MOVING

■ Incoming ■ Outgoing

Note: Interviewees stated more than one reason for moving

SPECIFIC ECONOMIC REASONS FOR MOVEMENT

ACCESS TO SPECIFIC SERVICES

DURATION OF STAY

	Total	Inflows	Outflows
A day or less	59%	54%	65%
If not a day, less than 2 weeks	20%	22%	17%
Between 2 weeks and 3 months	7%	9%	5%
Between 3 and 6 months	1%	1%	1%
Between 6 and 12 months	<1%	<1%	<1%
12 months or more	<1%	<1%	<1%
Not planning to leave as is habitual residence	10%	11%	9%
Don't know	3%	3%	2%

SUMMARY

- Most people interviewed commute to work in a different country.
- 65 per cent of movements due to economic reasons are for conducting business followed by commuting regularly for work or shopping (31%), search for livelihood or job (2%) and conducting agro-pastoral activities (2%).
- More than half (52%) of movements due to access to services are for food, water and health, followed by 37 per cent for primary health care, and specialized medical care (11%).
- The three most reported difficulties for people on the move is hunger/thirst (24%), financial issues (26%), and identity document issues (17%).
- For children below 10 years, the number of boys traveling doubled the number of girls (191 boys and 89 girls). The number of boys between 10 and 17 years traveling was slightly less than the number of girls (46 boys and 51 girls).

EMPLOYMENT STATUS OF MOVEMENTS WITH JOBS LINED-UP AT DESTINATION

Outflows	Total	Female	Male
Self-Employed	66%	31%	35%
Employed	19%	4%	15%
Daily Worker	8%	5%	3%
Unemployed	7%	4%	3%
Student	<1%	<1%	<1%

POTENTIAL INDICATORS OF PROTECTION RISK

- Generally, the literacy levels of males are higher than that of females.
- Almost 3 per cent of people interviewed declared having separated from their spouse.
- 1 per cent of females (25 girls) below the age of 18 years interviewed were already married.
- Almost 1 per cent of people interviewed declared having divorced their spouse.

METHODOLOGY

The Displacement Tracking Matrix (DTM) is implemented by the International Organization for Migration (IOM) in Uganda at the border with Kenya. DTM flow monitoring is a component of DTM used to derive quantitative estimates of the flow of individuals, track and monitor cross-border movement and population mobility to better inform on nature, volume, direction and drivers of migration, including the risk of trafficking and smuggling of migrants. The exercise counts the number of people passing through FMPs in both directions, informing on migration trends and patterns, migrants' place of origin, intended destination, reasons for moving and their socio-demographic characteristics. Data is collected on tablets/phones through interviews with people on the move, Key Informants (KI) and direct observation. Information is triangulated with other official or unofficial sources, when available.

LIMITATIONS

The FMPs are strategically placed to capture the most characteristic migration flows, and to complement the information captured through official PoEs established by the government authorities. Hence not all migration flows between two countries are covered by the existing FMPs, namely Malaba, Alakas, Abongai A and Loborokocha. The findings presented in this report are limited to the representation of flows in the location specified above, in view of defining a profile of the migration flows. Data collection is carried out seven days a week during the day from 8:00 to 17:00.
