

IOM DISPLACEMENT TRACKING MATRIX  
COVID-19 PERCEPTION SURVEY : TRAT PROVINCE  
SURVEY ANALYSIS: MARCH 2022

**DTM**

## Introduction

Thailand has been fighting COVID-19 longer than any country in the world except China – after isolating the virus on January 13, 2020. Thailand’s public health priorities in 2020 focused on limiting the spread of COVID-19, reducing morbidity and mortality associated with the virus and maintaining essential health services for the population. Vaccination offers Thailand another mechanism to combat COVID-19. The Ministry of Public Health (MoPH) is planning to immunize between 50-80% of persons living in Thailand against COVID-19 in 2021. This is planned out in phases as doses of vaccine will initially be limited. Healthcare workers, other essential workers, the elderly and those with chronic medical conditions have been prioritized for vaccination. Clear and accurate communications around the benefits and safety of the vaccine will be critical as immunization is extended to the general population, including migrant populations. Monitoring the progress of COVID-19 immunization will also be important to support policy and safety. This project aims to protect the health of people living in Thailand by strengthening communications for and monitoring of mass immunization campaigns against COVID-19.

## Methodology

The questionnaire tool was a collaborative effort between IOM’s Displacement Tracking Matrix (DTM), Migration Health Department (MHD), World Health Organization (WHO), UNICEF and World Vision Foundation. The survey was individual level survey with random sampling. Population of interest were all migrants in Thailand. We aimed for a 50:50 balance between female and male respondents. Twenty-five enumerators from DTM, World Vision Foundation Thailand and Sister Foundation collected data in different locations.

## Geographic Coverage

Tak, Ranong, Chanthaburi, Trat, Rayong, Chonburi and Greater Bangkok.

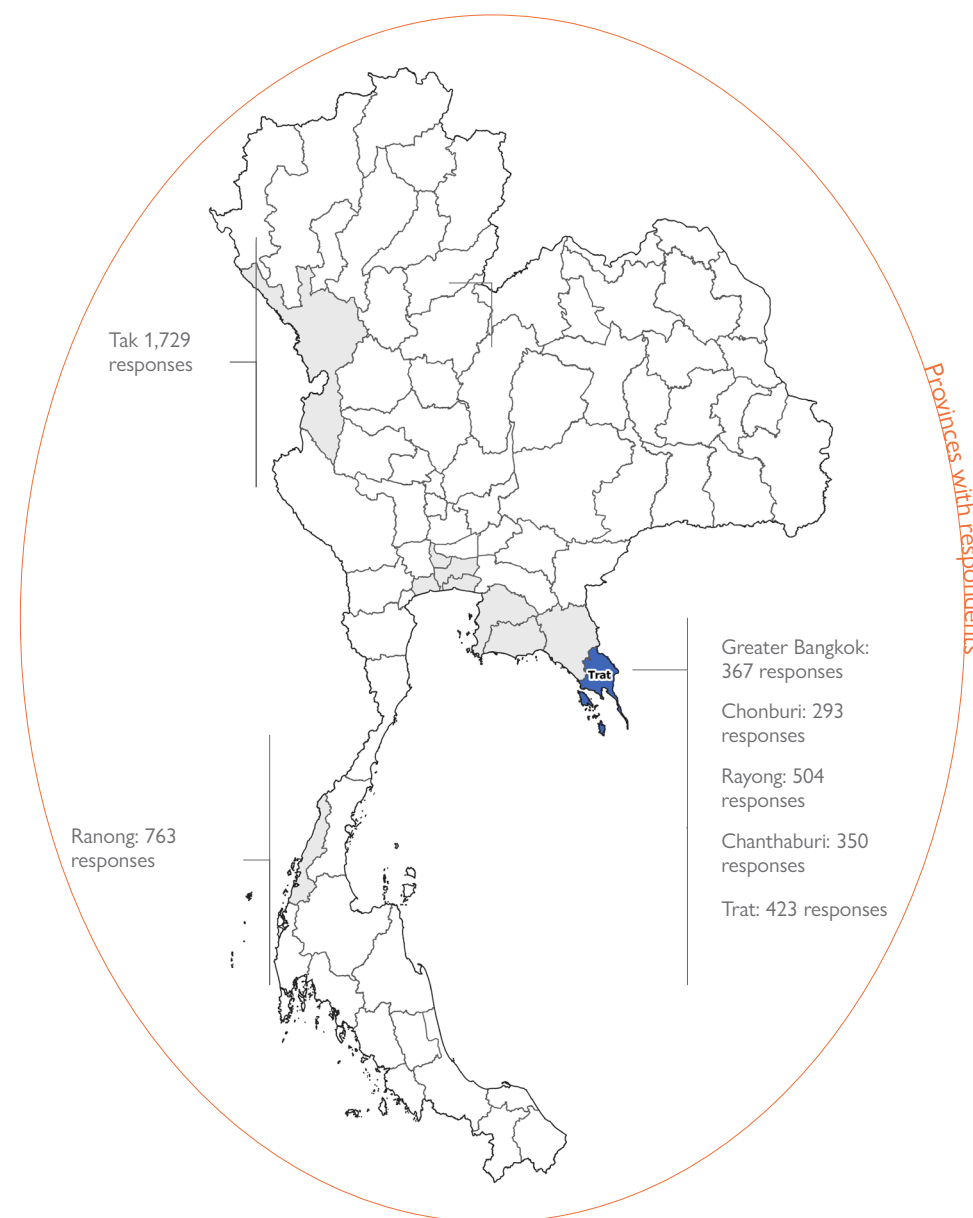

## Primary data collection period

Data was collected from 11th November 2021 till 13th February 2022.

## Limitations

Biases due to self-reporting may exist. Certain indicators/questions may be under-reported or over-reported, due to the subjectivity and perceptions of respondents (especially “social desirability bias”— the documented tendency of people to provide what they perceive to be the “right” answers to certain questions). These biases should be taken into consideration when interpreting findings.

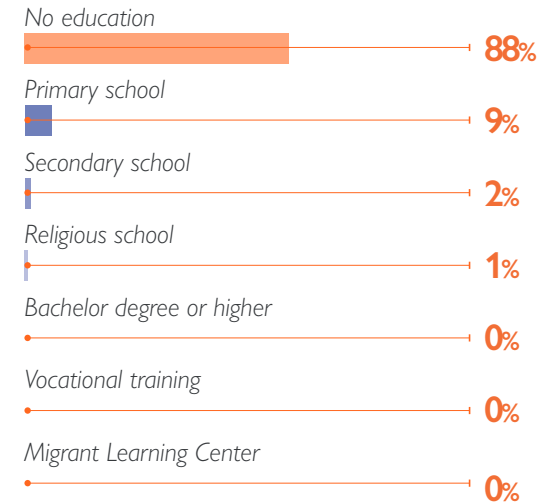

## Provinces where survey was implemented

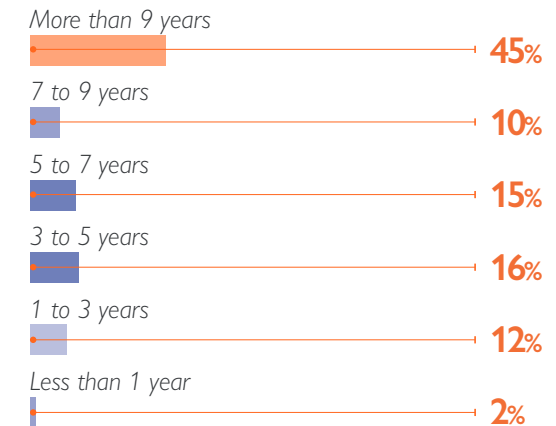

## Demographics of respondents

## Highest level of education reported by respondents

## Residing in Thailand

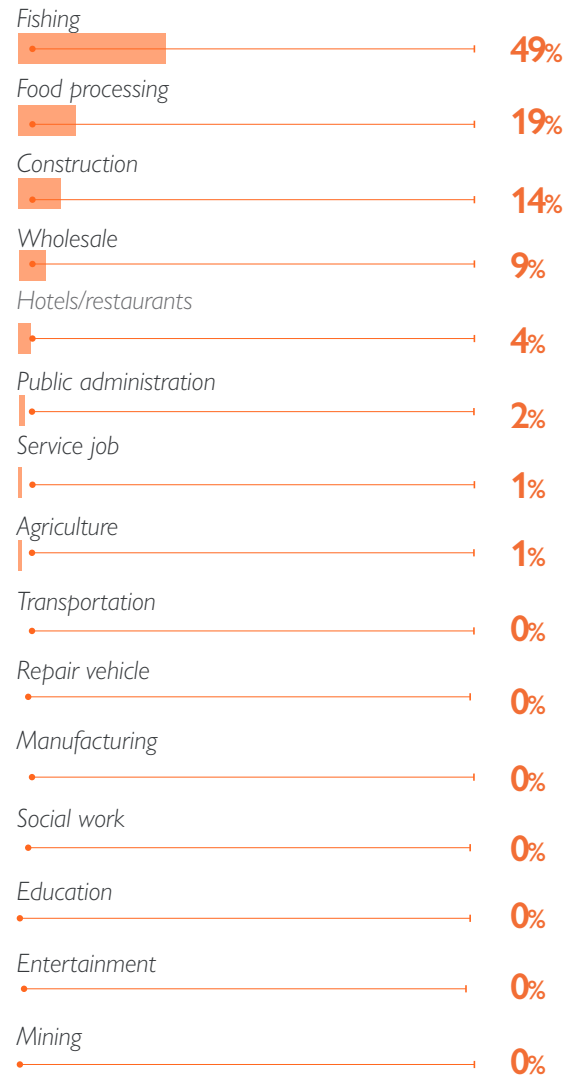

## Employment status

Respondents in Trat were asked to report on their employment status and overall, daily wage was the highest reported, followed by self employed and unpaid work. Sixteen per cent of the overall respondents reported not being employed.

Respondents who were employed at the time of data collection were further asked to report on the sector they worked in, and highest reported sector was fishing.

## Work sector†

## Documentation‡

Trat had the highest proportion of respondents who reported having white card compared to any other province where the survey was implemented.

† This question was only asked to respondents that reported being employed.

## Respondent or family member contracted COVID-19

**23%** of respondents reported they or someone in the family got COVID-19

**77%** of respondents reported neither they nor anyone from the family got COVID-19

A majority of respondents reported they or their family member did not contract COVID-19. This could be because of self-reporting bias where respondents tend to give answers that they perceive would be the right at the time of data collection.

## Concerns about COVID-19

Trat had the highest proportion of respondents who reported being very concerned compared to any other province.

## Vaccine status of respondents

- 1 Fully vaccinated (96%)
- 2 One dose (4%)
- 3 Not vaccinated (0%)

Trat had the highest proportion of respondents who reported getting fully vaccinated compared to the other provinces. Only 2 out of 423 respondents reported not vaccinated as their vaccine status.

## Vaccine availability†

## Underlying medical conditions

- 1 Yes, have medical condition (50%)
- 2 No, don't have medical condition (50%)
- 3 Do not want to answer (2%)

## Willingness to get vaccinated †

- 1 Yes, willing to get vaccinated (50%)
- 2 No, not willing to get vaccinated (50%)
- 3 Not sure (0%)

† This question was asked to respondents who reported not vaccinated for vaccine status

## Top 5 reasons for willingness to get vaccinated†

COVID-19 situation is bad in the area

## Top 5 reasons for vaccine hesitancy†

- 1 Side effects (100%)
- 2 Have chronic disease (100%)
- 3 No time to get vaccinated (0%)
- 4 Already healthy (0%)
- 5 Not enough information (0%)

## Vaccinate elderly

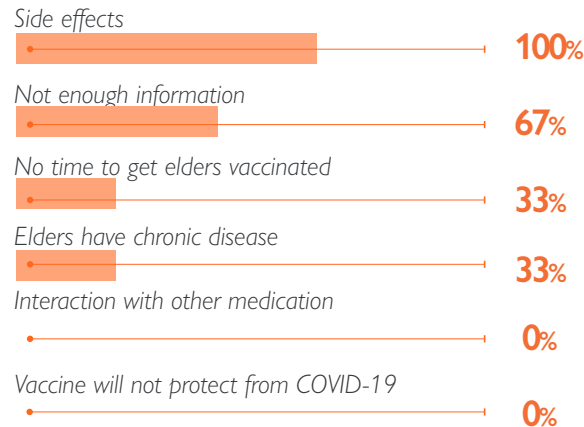

**76%** of respondents reported they are willing to get their elderly vaccinated, whereas **24%** did not have elderly parents

## Vaccinate children† †

**100%** of respondents reported they are willing to get their children vaccinated,

## Top 6 reasons for hesitancy to get elderly vaccinated† † †

† Respondents could select more than one options

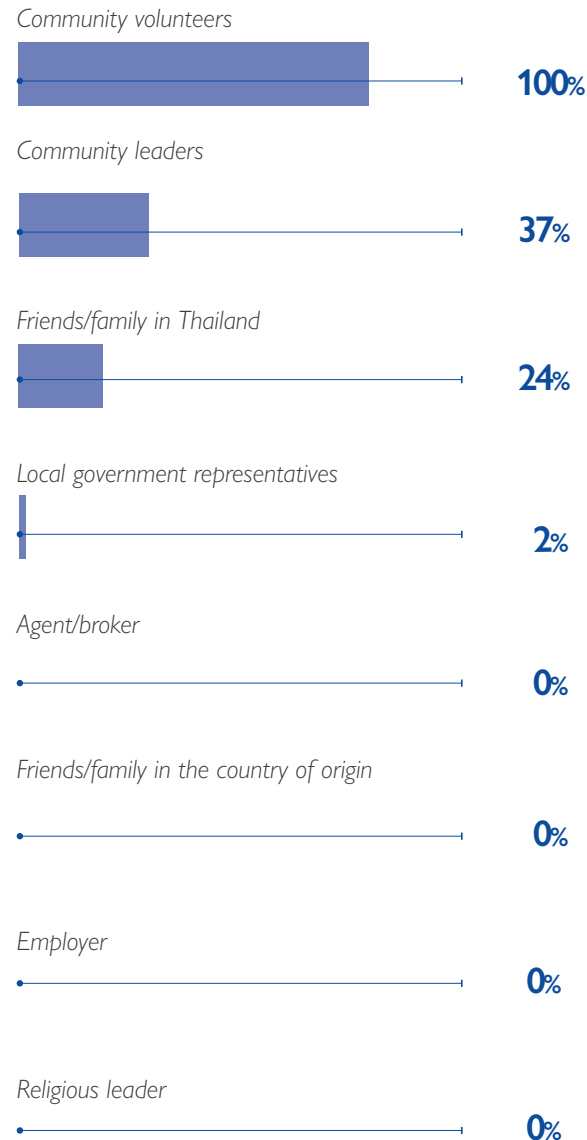

† † This question was only asked to respondents who reported having children

† † † This question was asked to respondents who reported not sure or not willing to get their elderly parents vaccinated. Respondents could select more than one option.

## Top 8 source of information on COVID-19 Vaccine

## Top 8 word of mouth source†

† This question was asked only to respondents who reported word of mouth. Respondents could select more than one option

## If information material was distributed in the area of the respondents

## Kind of COVID-19 information according to respondents missing or not being provided\*

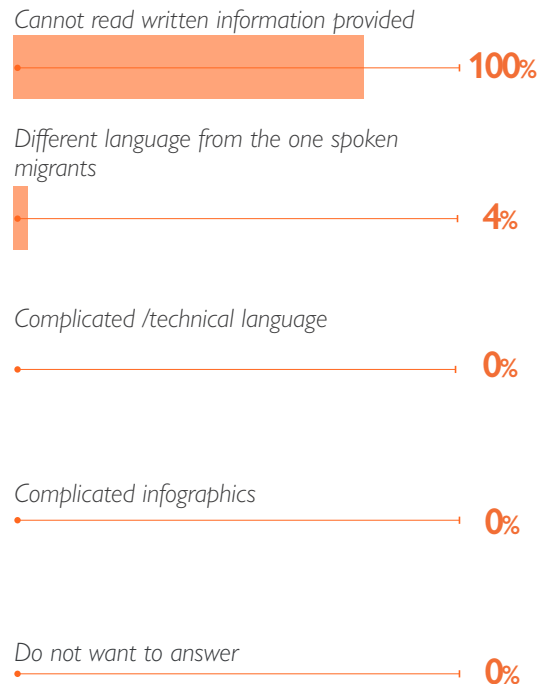

\* Respondents could choose more than one option

## How easy was it to understand distribution material†

Ranking: 5 being extremely difficult and 1 extremely easy

## If 4 and 5 ranked above, why was the information hard to understand?\*

## Reading levels of Thai language

Ranking: 1 being extremely difficult and 5 extremely easy

## Speaking levels of Thai language

Ranking: 1 being extremely difficult and 5 extremely easy

## Understanding of Thai language

Ranking: 1 being extremely difficult and 5 extremely easy

## Reading levels of Thai language

Ranking: 1 being extremely difficult and 5 extremely easy

† This question was asked to respondents who reported yes to information being distributed in their area.

\*Respondents could select more than one option.

## Daily wage more or equal than 315 THB

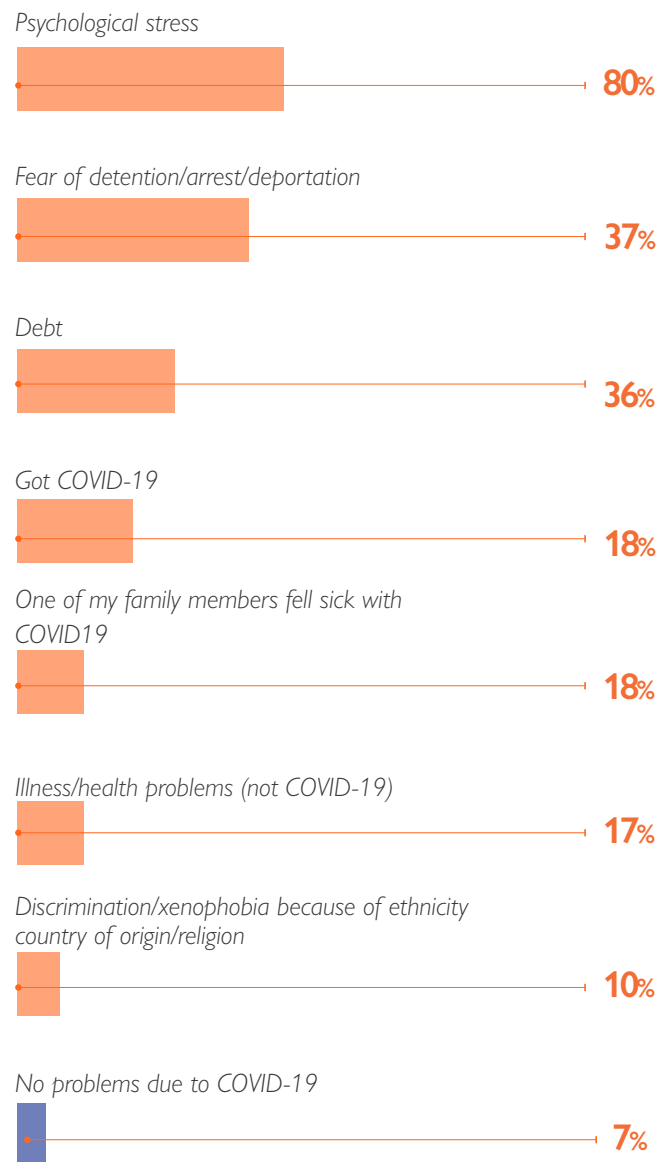

## In debt?

Trat had the second highest proportion of respondents who reported receiving daily wage more or equal to 315 THB compared to any other province where the survey was implemented.

† Respondents could choose more than one option

## Coping strategies reported for insufficient water†
